

MHP270 Single and Dual DC/DC Converters

270 VOLT INPUT – 65 WATT

FEATURES

Parallel operation with current share, up to 5 units (276 watts)

- Operating range -55° to +100°C
- Input voltage 160 to 400 VDC
- Transient protection 450 V for 50 ms
- Fully isolated, magnetic feedback
- Fixed high frequency switching
- Remote sense on single models
- Inhibit primary side and secondary side
- Sync In and Sync Out
- Indefinite short circuit protection
- High power density, up to 85% efficiency

DESCRIPTION

The MHP270 Series™ DC/DC converters provide up to 65 watts of output power over the full -55°C to 100°C temperature range. MHP270 models operate from a MIL-STD-704 nominal 270-volt DC power bus – from 160 to 400 VDC continuous operation with surges to 450 volts – and provide isolated outputs at 5, 12, 15, and 28 VDC. Parallel operation for all loading conditions is supported without any requirement for external components. The converters are available with standard screening or “ES” screening

MHP270 DC/DC converters are constant frequency, pulse width modulated switching power supplies which use a quasi-square wave, two-switch single-ended forward converter design. Tight load regulation is achieved through a wide-bandwidth magnetic feedback circuit.

Up to five single output MHP270 converters may be used in parallel to power a single load by simply connecting the share pins of all units. Units in this configuration have an 85% current sharing accuracy over 35% load to full load conditions.

MHP270 Series of converters feature a flexible synchronization scheme in which units may be synchronized to an external clock or to one another by using sync in and sync out pins provided on each unit. MHP270 converters have a nominal switching frequency of 525 kHz, but may be synchronized at any frequency from 475 to 575 kHz.

MHP270 converters meet a wide variety of military/aerospace performance and environmental specifications. Their continuous operation input voltage (160 to 400) meets the normal operating limits of MIL-STD-704. The unit shuts down above approximately 425 volts, but it is rated to withstand a surge of up to 450 volts for 50 msec. The units are built as fully hermetic thick film hybrids in our MIL-PRF-38534 certified facilities.

FEATURES

Undervoltage lock-out – shuts down when the input line voltage falls below approximately 120 VDC to provide smooth initialization.

Continuous short circuit protection – current limit set at approximately 125%.

Soft-start – controlled start-up at turn-on, release from inhibit and recovery from load fault conditions.

Remote sense – to provide automatic compensation for voltage drops on output lines on single output models.

US PATENTS

Interpoint converters may use one or more of the following US patents 5,521,807, 5,694,303, and 5,631,822.

MHP270 Single and Dual DC/DC Converters

270 VOLT INPUT – 65 WATT

OPERATING CONDITIONS AND CHARACTERISTICS

Input Voltage Range

- 160 to 400 VDC continuous
- 450 VDC for 50 msec transient

Output Power

- 50 to 65 watts depending on model

Lead Soldering Temperature (10 sec)

- 300°C

Storage Temperature Range (Case)

- -65°C to +150°C

Case Operating Temperature (Tc)

- -55 to +100°C full power

Output Voltage Temperature Coefficient

- 100 ppm/°C typical

Current Limit

- 125% of full load typical

Isolation

- 100 megohm minimum at 500 V

Conversion Frequency

- Free run mode 525 kHz typical
 - 475 kHz. min., 575 kHz max
- External sync range: 475 to 575 kHz

Low Line Drop Out

- Vout drops 1% of nominal
- Input voltage 155 VDC max

Undervoltage Lockout

- Input voltage 110 VDC min

SYNC AND INHIBIT

Sync

- Sync In
 - Input frequency 475 to 575 kHz.
 - Duty cycle 40% min, 60% max
 - Active low 0.8 V max
 - Active high 4.5 V min, 10 V max
 - Referenced to input common

Sync Out

- Referenced to input common

Inhibit (INH1, INH2)

- Active low (output disabled)
 - INH1 referenced to input common
 - Active low 0.8 V max
 - Inhibit pin will source 15 mA max
 - INH2 referenced to output common
 - Active low 0.5 V max
 - Inhibit pin will source 15 mA max
- Active high (output enabled)
 - Open collector
 - Open pin voltage: INH1 = 12V typ, INH2 = 5 V typ

MECHANICAL AND ENVIRONMENTAL

Size (maximum)

- 3.005 x 1.505 x 0.400 inches (76.33 x 38.23 x 10.16 mm)
- See case U for dimensions.

Weight (maximum)

- 86 grams max

Screening

- Standard or ES. See "MHP270 (Standard and /ES, non-QML Products" screening table for more information, page 10.

	RECOVERY ⁷	—	—	300	—	—	500	—	—	500	μs

Notes

- Share operation not characterized for dual outputs.
- Up to 80% of the total output power is available from either output provided that the opposite output is simultaneously carrying 20% of the total output power. One of the outputs must always provide a minimum of 20% of the total output power to meet cross regulation. Negative V_{out} cross regulation is referenced to 50%/50% balanced loads (at 100% of total rated output power - full load).
- Assumes balanced loads on the outputs.
- Effect on the negative output from 50%/50% loads to 70%/30% or 70%/30% loads.
- Unit will shut down above approximately 425V but will be undamaged and will restart when voltage drops into normal range.
- Second output at 50%
- Recovery time is measured from application of the transient to point at which V_{out} is within 1% of final value.
